

🎓 EDUCATION

- **Università degli Studi di Padova, INFN Sezione di Padova** Padova, Italy
Ph.D in Physics, cum laude *Oct 2017 – Sep 2020*
- **Università degli Studi di Padova** Padova, Italy
Master of Physics. 110/110 cum laude *Oct 2015 – Jul 2017*
- **Università degli Studi di Padova** Padova, Italy
Bachelor of Physics. 104/110 *Oct 2012 – Sep 2015*

🎓 SCHOOLS AND WORKSHOPS

- **19th JINR-ISU Baikal Summer School on Physics** Bolshie Koty, Lake Baikal, Russia
📄 <https://astronu.jinr.ru/school/current> *12 – 19 Jul 2019*
- **CERN School of Computing** Tel Aviv, Israel
📄 <https://indico.cern.ch/event/681081> *1 – 14 Oct 2018*
- **11th Neutrino Summer School** Mainz, Germany
📄 <http://inss2018.uni-mainz.de> *21 May – 1 Jun 2018*
- **INFN School of Statistics** Ischia, Italy
📄 <https://agenda.infn.it/event/infostat-2017> *7 – 11 May 2017*
- **8th INFN International School on efficient large scale scientific computing** Ce.U.B. Bertinoro, Italy
📄 <https://web.infn.it/esc16> *24 – 29 Oct 2016*

🎓 EXPERIENCE

- **GERDA** Dipartimento di Fisica e Astronomia “G. Galilei”, Padova
Simulation and background studies — task group leader *Oct 2017 – Present*
 - **Background model:** A predictive background model is essential when searching for rare events. In GERDA, the event energy spectrum is fitted to a mixture of simulated background and signal shapes, in order to constrain the presence of new physics phenomena in data [JHEP 03 (2020), 139].
 - **Liquid Argon veto:** The GERDA experiment achieves a leading background suppression efficiency by exploiting the scintillation properties of liquid argon, in which the germanium detectors are submerged. A part of the background model is devoted to reproduce the event suppression seen in data with Monte Carlo simulations.
 - **The MAGE simulation toolkit:** MAGE is a GEANT4 application developed in collaboration with the MAJORANA DEMONSTRATOR experiment to simulate background and signal events in various experimental setups, including GERDA, MAJORANA and LEGEND.
- **LEGEND** Dipartimento di Fisica e Astronomia “G. Galilei”, Padova
Oct 2017 – Present
 - **Background model:** Development of the LEGEND-1000 background model for the DOE project proposal.
 - **HPGe detector characterization:** Development of the data acquisition software suite used in the characterization campaign of the new point-type inverted-coaxial germanium detectors that will be deployed in LEGEND.
